

Making COVID Masks

The Challenge

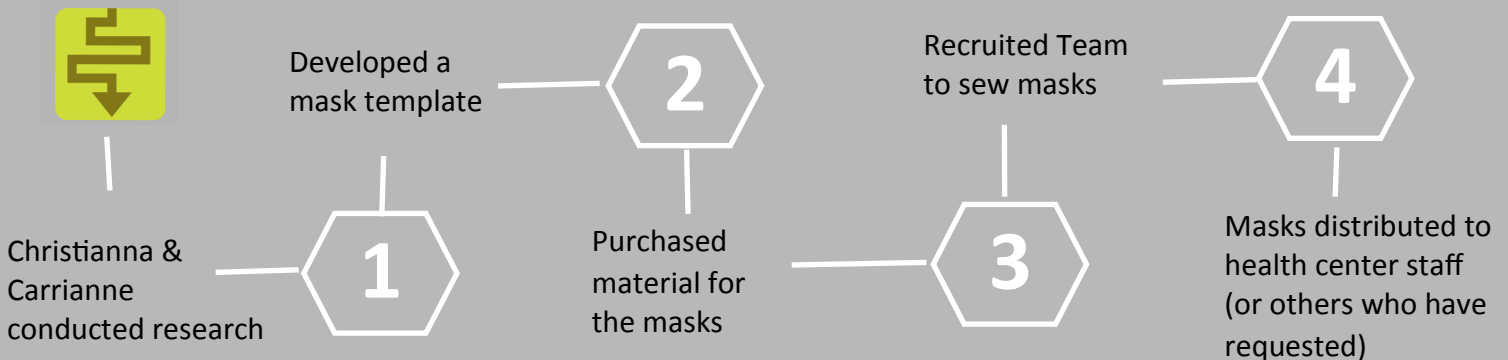

Personal protective Equipment is in short supply due to the global pandemic, and the demand for masks has increased dramatically due to COVID-19. The PPE supply chain prioritizes front-line healthcare staff before non-primary care staff, so Noojmowin Teg Health Centre has taken a creative approach to ensure all of their staff have the protection they need.

The Solution

- NTHC staff Christianna Jones and Carrienne Agawa conducted research on appropriate, effective and safe mask design and jointly developed a template.
- Christianna coordinated material purchases and recruited a NTHC sewing team to sew masks for staff (not for Primary Care)
- The NTHC sewing team produced a supply of cloth masks suitable for staff to wear
- Christianna created a distribution list for NTHC staff or others who have requested them

The Process
